[LinkedIn](#)

I have 3 years of experience in design and development of interface layouts for web applications. Passionate about systematizing information, drive AI into workflows, and bringing people together

Briefly
about me

Key Skills

- Creating and maintaining design systems and UI kits
- Working with AI models of different levels: Claude, Codex, and Qwen
- Adapting projects for AI-assisted workflows: developing skills and rules, set up permissions
- Data systematization and visualization
- Designing user flows and scenarios
- Advanced approaches to interface design: components, variables, auto layout, and slots
- Excellent knowledge of web development technologies (HTML, CSS, JavaScript, Astro, React) and understanding of technical constraints
- Effective collaboration with developers and cross-functional teams

Tools

- Figma & FigJam
- Adobe Creative Suite (After Effects, Photoshop)
- Visual Studio Code
- Excel

Languages

- Russian (native)
- English (B1)
- French (A1)

Work
experience

Design Engineer · Raiffeisen Bank Russia

March 2025 — Present · 1 year 2 months

I standardize and improve the adoption of the web design system in Figma and React, initiate cross-functional collaboration, and develop AI-powered interface generation:

- Accelerated routine design tasks in Figma up to 4x by introducing coding agents into the team workflow: minor component changes, bulk variable operations and publish to gitlab
- Developed an automatic environment setup script that reduced onboarding time for interface generation from 1.5 hours to 5 minutes and lowered the barrier for non-developers
- Authored a series of guides on AI-powered interface generation with the design system (the materials reached 2,500+ views among 140+ specialists)
- Led a workshop for designers on prototyping in Figma Make and prepared a template based on design system styles for 50+ designers
- Designed a unified semantic color palette for multiple products to improve design consistency across different domains
- Analyzed 70+ design system components and eliminated visual inconsistencies between Figma and React libraries (68% → 0%)

UX/UI Designer · Contract

Jul 2023 — March 2025 · 1 year 9 months

Created 4 end-to-end B2C projects in medtech, foodtech, and proptech:

- Designed adaptive interfaces with cross-platform compatibility
- Standardized fragmented content from 12 property developers, accelerating property presentations by 2x and boosting user engagement
- Analyzed metrics and iteratively redesigned layouts, resulting in 8x faster mobile site loading and reduced bounce rates
- Performed competitor benchmarking to adopt industry best practices and differentiate the product during the design phase
- Developed a rough web app prototype in 1 week to validate technical feasibility and business viability
- Built interactive prototypes for hypothesis testing, minimizing development-stage errors
- Created UI kits to ensure interface consistency and streamline handoffs to developers
- Engaged in project management and collaborated with backend developer
- Provided weekly feedback to clients, which helped accelerate decision-making and reduce revisions

Education

Bachelor's Degree · Multimedia Technology and Information Design

Perm National Research Polytechnic University

- I actively apply the knowledge gained at the university in projects
- Grade point average: 4.92/5
